

CD 2000 Transport and 2500 Player

Design:
Manufacturer: Oracle Audio, PQ
Date: 2006

“Since 1979, Oracle Audio has been satisfying a passionate desire of thousands of audiophiles in the world. Anyone who was around when Oracle’s player was introduced recalls the stir caused by its audacious beauty. In a world of sedate boxes, it was a lightning bolt— stripped to its essence and industrially futuristic in its obvious functionality, yet executed with an eye toward detail, finish, proportion, and style. The result was a device of staggering beauty. No one who saw an Oracle was left untouched. Photos don’t do it justice, and a verbal description doesn’t come close. Imagine something that’s equal thirds Buck Rogers, James Bond, and MoMA, with an attention to detail and fit’n’finish that scream exquisite hand-craftsmanship”.

Turntable

Design:
Manufacturer: Oracle Audio
Date: 1970's to current

This design is world known as the premier audiophile turntable. This remarkable design has been relatively unchanged in the market for over twenty years. Purposefully designed to be upgradeable, repaired and bomb proof, this product goes against the contemporary visions of design practice where newness and planned obsolescence seem to take priority. This is the benchmark piece of gear that audiophile magazines use to test other turntables against. Unbelievably attractive, it reeks of high quality, precision and individualism
