

Since 1979, Oracle Audio Technologies has been famous for their hand-crafted Delphi turntables. Well, here's the newest MK-V version. Each suspension tower uses no less than twelve different components while the massive eight pound platter keeps the vinyl nice and flat with the aid of the new center clamp. The new bearing replaces the traditional two bushing system with six nylon precision surfaced setscrews. The new Turbo Power Supply has been redesigned to achieve very high performance! Oracle continues to be the "Fine Art of Playing Music."
